

GL 1800 Goldwing

Installation for GL 1800 heated hand grip adaptor

Only OE heated seat models 2006 and up

The grip heater adaptor plugs into the same fitting as the wiring harness for the OE seat when it's removed.

Before turning the ignition key to the on position make sure both rider and passenger heated seat controls are turned to the off position.

This allows the heated hand grip control to be used without sending an error code.

The engine must be running for the heated hand grips to work.
