

Ride-on Rain Covers Installation

Goldwing GL1800

Your new Ride-on rain covers will protect your Ultimate seats from the elements. Use them for rain and sun protection and your seats will look like new for years. Our seat rain covers are made using the same material as “Frogg Toggs rain suits” this material is light and breathable and has welded seams.

The material has no stretch so care must be taken when installing, pull on the elastic edging not the welded seams.

Remove your rider backrest before you start installation.

The covers have a white tab to mark the front.

1. Locate the front white tab and with a hand on both sides slide the cover nose from side to side and down between the seat and the tank.
2. Now connect the elastic around each grab handle and push the cover to the bottom of the handles against the seat.
3. Now pull the passenger pillow out a little so you can install the cover around each end of the pillow and tuck it down behind the pillow.
4. You can now pull the sides of the cover down on each side and tuck it under the seat.
5. The passenger backrest pad cover has a white tab on the top, install each bottom corner first and then the top by sliding the cover between the backrest and the trunk. Now open the trunk and pull up the bottom of the rain cover.
6. All rider backrest covers install from the side.

Before you fold up the covers and place them in the storage bag make sure they are completely dry.
