

## **Can-Am Spyder RT – all models** **Ultimate seat Installation - one pc seat**

### **Tools needed to change seat**

Open wrench 10 mm = 1

Open wrench 13 mm = 2

Small screwdriver = 1

Torque bit T30 = 1

Torque bit T20 = 1

Socket 10 mm x 3/8" drive = 1

Stanley rotator ratchet 3/8" drive part # 89-962 (for the two rear hinge bracket bolts)  
(this tool makes it real easy to remove and install the two bolts in the rear hinge bracket)

Remove the passenger backrest pad and the stock seat and keep the two bushings from the rear hinge bracket and the two bolts and nuts, remove the seat lifting arm from the frame.

From the stock seat remove the front latch pin and the lift arm ball joint and the passenger seat sensor unit, you will need these parts to install the Ultimate seat.

1. Install front latch pin into the Ultimate seat, leave the lock nuts loose and adjust the length of the pin so it will latch into the Spyder lock plate, you will do this final adjustment later.
2. Install the passenger sensor unit into the Ultimate seat and the lift arm ball joint
3. Insert the two stock rear hinge bracket bushings into the Ultimate seat bracket, use a dab of Vaseline or grease to hold them in for assembly and place seat on the Spyder frame with the latch pin located into the latch.
4. Insert the two stock bolts and nuts into the rear bracket and finger tighten only.
5. Adjust the front latch pin length now so the seat will latch in with a small amount of up and down clearance. With the seat latched in the closed position tighten the two rear hinge bracket bolts, be careful not to over tighten, they need only 18 lbs ft. torque.
6. Install the seat lift arm and plug in the passenger seat sensor.
7. When you reinstall the **stock** passenger backrest (be careful not to push too hard on the screws as the internal nuts will push out inside the backrest)
- 8. If you have purchased the new Ultimate passenger backrest see separate page for Install instructions.**

Enjoy the ride again on your Ultimate seats
