

Ultimate seats

Valkyrie Interstate Combo Installation

Include kit

2 stainless button head bolts 6 mm x 20 mm long w/washers
1 hex key 4 mm

Your Valkyrie Interstate comes with a one-piece rider and passenger seat. **The Ultimate replacement is a two piece system.** Our passenger seat mounts right on with no modifications. Two bolts in the front mounting bracket (supplied) go into the fender from the top (threaded holes already in the fender) and one bolt in the rear mounting bracket (already in the fender) installation takes a few minutes. The **Ultimate** rider seat fits just like stock using the key lock.

Passenger seat installation

The passenger seat rear mounting bracket is slotted so you don't need to remove the rear screw from the fender.

Using a 5 mm hex key, loosen the rear screw in the fender about 4 or 5 turns, just enough so the rear slotted bracket will slide under the screw head.

Do not tighten this rear screw yet.

Install the 2 front screws with washers (supplied) with the 4 mm hex key (supplied)
Tighten these 2 screws and then tighten the rear screw.

Passenger backrest

To remove the backrest from the trunk, open the trunk and remove the 3 nuts up under the lid with a 12 mm socket.

Close the trunk lid and with your hands on both sides of the backrest lift straight up.
Do not try to pull it forward as there are 2 tabs on the back that need to release.

To install your new Ultimate passenger backrest it's the same procedure in reverse.
