Can–Am Spyder RT – all models up to 2019
Ultimate seat Installation - one pc seat

Tools needed to change seat
Open wrench 10 mm = 1
Open wrench 13 mm = 2
Small screwdriver = 1
Torque bit T30 = 1
Torque bit T20 = 1
Socket 10 mm x 3/8" drive = 1
Stanley rotator ratchet 3/8" drive part # 89-962 (for the two rear hinge bracket bolts)
(this tool makes it real easy to remove and install the two bolts in the rear hinge bracket)

1. Remove the passenger backrest pad first, 3 screws inside the trunk and 2 on top.
2. Lift the seat and remove the seat lift arm from the seat and the frame.
3. Unplug the passenger pressure sensor.
4. Remove the two rear bolts from the stock seat and keep the two bushings from the rear hinge bracket and the two bolts and square plastic nuts.
5. Lay the stock seat bottom up on a table next to your new Ultimate seat bottom up.
6. From the stock seat remove the front latch pin, discard the latch pin nut. Remove the lift arm ball joint and the passenger seat sensor unit and install these parts in the Ultimate seat.
7. Adjust the latch pin length by loosening the two lock nuts and measure as per pic. 1.
Now install the latch pin and stock washer into the Ultimate seat and tighten it down.

Minimum 1 1/2"

8. Insert the two stock rear hinge bracket bushings into the Ultimate seat bracket, use a dab of Vaseline or grease to hold them in for assembly and place seat on the Spyder frame.
8. Latch the seat down into the closed locked position.
9. Insert the two stock bolts and nuts into the rear bracket, do not over tighten, they need only 18 lbs ft of torque.
10. Now install the seat lift arm and plug in the passenger seat sensor.
11. Now reinstall the **stock** passenger backrest or **if you have purchased the new Ultimate passenger backrest see separate page for install instructions.**

Enjoy the ride again on your Ultimate seats.
